When choosing complete winter wheels, refer to the data stated in the technical certificate of your vehicle.

Why choose Škoda accessories?

With us, you are assured of products and accessories that were designed specifically for the individual Škoda models. We provide you with a one-stop-shop for not just a wide range of complete winter wheels, but also other accessories like snow chains and ski racks. We combine the rims from Škoda Genuine Accessories with tyres from renowned manufacturers who meet strict European standards, thus making sure you only receive the very best. Technology is nothing without a personal touch. When choosing your tyres or accessories, our extremely qualified personnel will guide you at every step.

Why choose complete wheels?

Winter is around the corner and you must perform the necessary but boring task of taking the summer tyres off the rims and fitting the winter ones. However, such repeated mounting and demounting of the tyre from the rim can deform both. With complete wheels, you buy the rim and the wheel as a set which makes changing tyres safer and simpler. The product consists of a lightweight alloy wheel (including a wheel centre cap with the Škoda logo). It is also possible to purchase a set of hub covers for complete steel wheels.

Škoda +Tyres

As it launches the Enyaq, its first model built on the Volkswagen Group's MEB platform, Škoda has also come up with a new strategy for tyres. The tyres, which are tailor-made so that they are specially adapted to the characteristics of each model, benefit customers by delivering enhanced comfort, quality, safety, and increased electric range. The Škoda Genuine +Tyres are engineered to original equipment standards and, to make them easily recognisable, they have a special mark on the sidewall in the form of a +.

How to care for your tyres when they're not in use

Usually, the chemical and physical processes in the tyre material cause it to age. However, in properly stored tyres and complete wheels, these processes are much slower, thus extending their life.

A few tips:

- Store the tyres in a cool, dry place
- Keep them away from direct light, chemicals, and ozone sources
- Before storing, use a tyre brush to remove brake dust, dirt, and grime
- If possible, prevent moisture from entering the tyres

Tyres with rim

Standing side-by-side | Suspended | Stacked on top of each other

Tyres without rim

Stacked on top of each other | Suspended | Standing side-by-side

While all tyres will eventually age, following the above precautions will help them retain their original well-balanced properties for much longer.

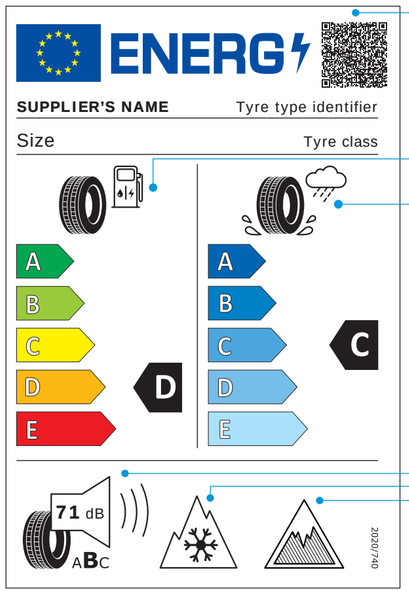

Like everything else, check the label first

Just like with food in a supermarket, labels on new tyres help you find your way around the options. They inform and encourage you to choose tyres that are safer, more economical and also ecological.

The European Union regulation on mandatory marking of new tyres has been in operation for many years. Tyres sold in the EU bear a label similar to those on home appliances, identifying the performance class in three criteria:

- Fuel efficiency
- Wet adhesion
- Outside noise

While the information on labels is important, it's not the only guide to correct tyre selection. For your maximum comfort and safety, you should focus on your individual needs and stick to the tyre dimensions stipulated by the vehicle manufacturer.

QR code

Use this QR code to find out more about EU tyre labelling (EPREL database), so you can make an informed decision when purchasing replacement tyres.

Fuel consumption – rolling resistance

Reducing rolling resistance results in fuel savings, thereby reducing CO_2 emissions.
The classification ranges from A (green) to E (red).
±0.1 l per 100 km for each class.

Grip in wet conditions – braking performance

Among other things, the crucial factor for safety is how well the tyres grip in wet conditions. Here, the braking power is divided into classes A to E.
The difference in braking distances between individual classes on a wet road at a default speed of 80 km/h is between 3–6 metres, i.e. more than the length of the vehicle.
≥ 18 metres difference in braking distance

Exterior noise

As indicated by the loudspeaker symbol, this classification visualises the intensity of the noise that the tyre emits as a result of contact with the road while it is in motion. Exterior noise levels are measured in decibels (dB) and calculated in accordance with UNECE Regulation No 117. The external rolling noise class shall be determined and illustrated on the tyre label in classes ranging from A to C.

Snow grip

The tyre, which satisfies the minimum snow grip values set out in UNECE Regulation No 117, shall be classified as a tyre for use in severe snow conditions and the following pictogram shall be included on the tyre label.

Ice grip

The tyre, which satisfies the minimum ice grip index values, shall include the following pictogram. The ice grip performance should be tested in accordance with reliable, accurate, and reproducible methods determined by the regulation.

Tyres with AirStop will keep you going

AirStop is a self-sealing tyre technology that allows you to safely drive to a nearby workshop or dealership. This technology is also known as Seal Inside on Pirelli tyres, ContiSeal on Continental tyres, and B-Seal on Bridgestone tyres.

AirStop tyres have a layer of viscous sealing compound made of butadiene rubber that is applied to the inside of the running surface between the tyre walls. If the tyre is pierced with a hole up to 5 mm in diameter, the viscous compound immediately seals the puncture. This prevents pressure loss (even if the object that caused the puncture detaches from the running surface), allowing you to make your way to the nearest mechanic, dealership, or workshop.

Škoda Tyres Guarantee

Even the highest quality tyres aren't totally immune to the obstacles they encounter on the road. Whether caused by nails, sharp kerbs, or rocks, the tyre damage is usually so extensive that you have to purchase a new one. This is why the Škoda Tyres Guarantee programme ensures that a severely damaged tyre won't upset your finances. With this guarantee you can enjoy a discount of up to 70% on the new tyre price. You automatically qualify for this guarantee when you buy the complete winter wheel package from an authorised Škoda business partner. The guarantee covers individual tyres, regardless of how many you purchase. It applies to non-repairable damage sustained during normal operation, including, but not limited to, running onto a kerb. If you have a valid lifetime mobility guarantee, you can also have your vehicle towed to the nearest Škoda authorised service shop. The discount amount (as well as the guarantee period) depends on the depth of the tyre tread profile, with the limit being 5 mm. To be valid, claims under warranty must be submitted within 3 years of the purchase date of the complete winter wheels. You can register the guarantee with any Škoda authorised partner in your country.

Enjoy winter, even in bad weather

Winter equipment

The mandatory use of winter tyres depends on the legislation of your country. Regardless of whether winter tyres are mandatory or not, your safety during winter months is extremely important, especially when routes may be covered by a continuous layer of snow or ice.

It is worth remembering that:

- The risk of accident is six times greater in winter
- Summer tyres lose their effectiveness at temperatures below +7°C

Head out to the mountains to indulge in winter adventures regardless of the weather. All you need are winter tyres on all four wheels with a minimum tread profile of 4 mm!

The benefits of winter tyres:

- They are made of mixtures specially developed for the winter period
- They have better adhesion at temperatures below + 7°C compared to summer tyres, which also results in a shorter braking distance
- They perform well – not only on snow-covered roads, but also on wet roads or on dry, cold surfaces
- Thanks to the special tread design, they drain water better, reducing the risk of aquaplaning
- They keep to the course better and can even grip when running on snow

Additional tyre facts:

- New tyres are considered run-in after about 300 km
- The tyre pressure needs to be checked several times during winter

Contact your authorised Škoda partner to ask about having your winter wheels stored during summer, and vice versa.

Professional wheel assembly

The benefits of expert assembly:

- Guaranteed high-quality professional installation performed directly by the wheel assembler
- The same quality as the wheels that come with cars of that series
- The complete assembly is fully automated
- At the end, the final product undergoes a physical inspection performed by authorised personnel as part of visual quality control measures

The advantages of complete winter wheels:

- Save on the time and expense of changing tyres
- When purchasing complete winter wheels from Škoda Auto a. s., the customer also receives the Škoda Tyres Guarantee

Škoda Genuine Accessories are offered by Škoda as optional extras for an additional charge. Colours, designs and materials may differ from those in the illustrations. Information such as specifications, appearance, performance, dimensions, weight, fuel consumption, and operating costs relating to the illustrated vehicles and products is based on information available at the time of printing this document, and Škoda Auto reserves the right to change this data.
Correct rim and tyre size combinations are available in the Registration Certificate and/or from your dealer. When choosing snow chains, make sure to follow the indications in your car's certificate of roadworthiness. Wheels depicted on the cars may not be part of the available range.
Please contact your Škoda partner for information as to which products are available and suitable for your model, what restrictions apply, the installation times required, and costs. Subject to change without notice.
Vehicle parameters such as weight, rolling resistance, and aerodynamics may vary depending on additional equipment and accessories (attachments, tyre sizes, etc.) and may, together with weather, traffic conditions, and individual driving styles, affect fuel consumption, electricity consumption, CO_2 emissions, and other performance parameters. Škoda Genuine Accessories are not used to determine consumption and emission levels, and can therefore only be fitted once the vehicle has been registered for the first time.
